PRODUCT DESCRIPTION:
i.tech BRIXMENT Mortar Cement is a prepackaged Mortar Cement meeting or exceeding the requirements of ASTM C 1329. i.tech BRIXMENT Mortar Cement is combination of portland cement that meets ASTM C 150, finely ground limestone and proprietary admixtures that enhance boardlife and durability. Essroc carefully selects and blends the raw materials and follows stringent quality control procedures in the manufacturing of i.tech BRIXMENT Mortar Cement.

BENEFITS:
• High Bond Strength
• Excellent Workability and Board Life
• Long-term Durability
• Reduced Shrinkage

APPLICATIONS:
i.tech BRIXMENT Mortar Cement can be used for mortar in the construction of all types of masonry walls. The most common masonry units utilized are concrete block, clay and concrete brick and natural and manufactured stone.

TYPES AND USES:
i.tech BRIXMENT Mortar Cement is manufactured in two types: Type N and Type S. ASTM C 270 provides recommendations for mortar choices in a concise tabular format as shown here.

From ASTM C 270
PACKAGING:
i.tech BRIXMENT Mortar Cement Type N is packaged in 70 lbs. (32 kg) multi-walled bags and Type S is packaged in 75 lbs. (34 kg) multi-walled bags. Packages should be kept free from moisture.

AVAILABILITY & PRICING:

APPLICABLE STANDARDS:
i.tech BRIXMENT Mortar Cement conforms to the requirements of ASTM C 1329, Standard Specification for Mortar Cement.

MIXING:
Assure that the mixing equipment is clean and in good working order. Provide a one cubic foot box or other suitable container for volumetric measuring of aggregate. Aggregate shall conform to the requirements of ASTM C 144. Water shall be potable. i.tech BRIXMENT Mortar Cement should be mixed with 2 ¼ to 3 cubic feet of sand according to Table 1 Proportion Specification of ASTM C 270. If an independent laboratory completes ASTM C 780 preconstruction testing that demonstrates compliance to table 2 of ASTM C 270, then up to 3 ½ parts of sand may be used per bag of i.tech BRIXMENT Mortar Cement. Start the mixer, place ¾ of the required amount of water, ½ the required amount of sand and all the i.tech BRIXMENT Mortar Cement into the mixer. Mix briefly. Add the remaining sand and water to the mixer and mix for a minimum of 3 and a maximum of 5 minutes after the last mix water has been added. This assures homogeneity and workability of the mortar. Although minor retempering is allowed, mortar should be used or discarded after 90 minutes.

WORKMANSHIP:
Set masonry units in mortar beds as quickly as possible after the mortar bed is placed. Avoid furrowing bed joints. Provide enough mortar to guarantee full head and bed joints. Don’t attempt to move or adjust masonry units once the mortar has begun to stiffen. This can interfere with the bond between the mortar and the masonry unit. If one or more masonry units needs to be adjusted, remove the units and reset them in fresh mortar.

TOOLING JOINTS:
Mortar joints should be tooled when the surface is ‘thumb-print’ hard. Proper tooling increases the contact area between the masonry unit and mortar and provides for a weather-resistant joint. Improper or inconsistent timing when tooling joints lead to variation in the colored of the mortar joint and could adversely affect weather resistance.

PRECAUTIONS:
Minimize direct contact with wet cement. Exposure of sufficient duration to wet portland cement can cause serious, potentially irreversible tissue (skin or eye) destruction in the form of chemical (caustic) burns. Consult the relevant MSDS before working with i.tech BRIXMENT Mortar Cement.

WARRANTY:
Essroc warrants that its products are free from manufacturing defects and conform to applicable ASTM standards. Essroc makes no warranty or guarantee, express or implied, including warranties of fitness for a particular purpose or merchantability, respecting its products. User assumes all risks and liability in connection with the suitability of the products for the intended use.
